Partialwellenmethode

Lösung der Schrödingergleichung $\frac{1}{r}\partial_r^2(rR(r)) + (k^2 - \frac{l(l+1)}{r})R(r) = v(r)R(r)$ für den Radialteil R(r) der Wellenfunktion über Bessel- j_l und Neumannfunktionen n_l .

Für $r \to \infty$ ist $rR(r) \propto \sin\left(kr - l\frac{\pi}{2} + \delta_l\right)$.

Falls δ_l bekannt gilt für $r \to \infty$:

$$\psi(r,\theta,\phi) = \sum_{l} \frac{2l+1}{2k} \left(\left[-i + 2e^{i\delta_{l}} \sin \delta_{l} \right] \frac{e^{ikr}}{r} + i(-1)^{l} \frac{e^{-ikr}}{r} \right) P_{l}(\cos \theta)$$

$$e^{i\mathbf{k}\mathbf{x}} = \sum_{l} \frac{2l+1}{2k} \left(-i \frac{e^{ikr}}{r} + i(-1)^{l} \frac{e^{-ikr}}{r} \right) P_{l}(\cos \theta)$$

$$f(\theta) = \sum_{l} \frac{2l+1}{k} e^{i\delta_{l}} \sin \delta_{l} P_{l}(\cos \theta)$$

$$\frac{d\sigma}{d\Sigma} = |f(\theta)|^{2} = \sum_{ll'} \frac{(2l+1)(2l'+1)}{k^{2}} e^{i\delta_{l}-i\delta_{l'}} \sin \delta_{l} \sin \delta_{l'} P_{l} P_{l'}$$

$$\sigma = \int d\sigma = \int d\Sigma |f(\theta)|^{2} = 2\pi \int_{-1}^{1} d\cos \theta |f(\theta)|^{2} = \frac{4\pi}{k^{2}} \sum_{l} (2l+1) \sin^{2} \delta_{l}$$
